2FGB80B	80	150	45
2FGB100B	100	150	45
2FGB125B	125	150	45
2FGB150B	150	150	45

APPLICATION AND USE

2FGB.B balanced valve bodies are designed for use in air-conditioning, thermoventilation and heating systems and in industrial process systems; they cannot be used as safety valves. They can be employed to control fluids belonging to group 2 according to the article 13 of 2014/68/UE directive (PED).

Group 2 includes water, overheated water, steam. For fluids belonging to group 2 differing from the ones listed above, please contact our Sales Support.

The peculiar characteristic of such valves is they can operate under high close off pressures and wherever low leakage is required. This makes them particularly suitable in applications with high pressure and high DT, such as overheated water (i.e. district heating, boiler supply) and steam.

MANUFACTURING CHARACTERISTICS

Valve body and seat:	grey cast iron (EN-GJS-250 EN 1561)
Stem:	stainless steel
Plug:	brass (DN65÷100) bronze (DN125÷150)
Balancing gasket:	Viton O-ring + Teflon ring
Stem packing:	EPDM

TECHNICAL CHARACTERISTICS

Construction:	PN16
flanged connections:	PN16 flanges with ANSI bolt holes are available on request;
Control characteristic:	equal percentage;
Leakage (Kvs %):	0,03;
Allowed fluids:	
- water:	min. temperature -10 °C*; glycole added 60%;
- overheated water:	max temperature 150 °C**;
- steam:	max pressure 200 kPa; max temperature 150 °C;
Storage temp.:	-20T60 °C;
Weight:	see dimensions.

* See 248 accessory.

** Temperature/pressure ratio according to the following standards: UNI1092-2 and UNI12516-4.

Reference standards

Control valves for hot water heating plants: UNI 9753

Flow characteristics: IEC 534-2-4

Leakage: leakage is measured according to the EN1349 standard.

INSTALLATION

Hydraulic connections

Respect the fluid directions: inlet is labelled by AB and outlet by A.

Valve mounting

Before mounting the valve, make sure pipes are clean, free from welding slags. The pipes must be perfectly aligned with the valve body and not subjected to vibrations.

For installations on plants with high temperature fluids (steam, overheated water) use expansion joints to avoid the dilatation of pipes to stress the valve body.

In any case, avoid installing the valve in plants which are considered aggressive and/or corrosive for valve materials.

Please contact our Sales Support in order to define, which potentially aggressive or polluting substances can be used.

We disclaim all responsibility in case of valve failure due to external fortuitous events (fire, earthquakes etc.).

The valve can be mounted in any position included in the 180° from vertical.

Mount the valves with the actuator in vertical position with fluid temperature up to 120 °C. For higher temperatures, the valves must be mounted horizontally, otherwise the use of the MVHT accessory is required.

MOTORIZED VALVES OPTIONS

- A125-2** Flanges with ANSI 125 bolt holes
2FGB.BPS89 Grooved valves PN16 to which it is possible to add the relating joint not supplied with the product. General dimensions remain the same. Joint and pipe dimensions are shown in the "Dimensions" paragraph.

ACCESSORIES

- 248** stem heater for applications with possible ice formation on stem and packing with MVH and MVE actuators.
MVHT valve body actuator spacer to reduce the direct exposure of the actuator when installed on a valve with high temperature fluids.
 Dimensions: Ø 120 mm; h = actuator height + 102 mm
GVB65 thermal insulation for DN65 for 2FGB65B valves;
GVB80 thermal insulation for DN80 for 2FGB80B valves;
GVB100 thermal insulation for DN100 for 2FGB100B valves;
GVB125 thermal insulation for DN125 for 2FGB125B valves;
GVB150 thermal insulation for DN150 for 2FGB150B valves.

	125	200	1600	510	350	1040	1600	1600

100 kPa = 1 bar = 10 m_{H₂O}

Kvs is the flow rate expressed in m³/h of water at a temperature between 5 °C and 40 °C passing through a valve, open at nominal stroke, having a 100 kPa (1 bar) differential pressure.

* MVHE.A in emergency closes the valve, MVHE.C opens the valve.

MAX REGULATION DIFFERENTIAL PRESSURE [kPa]

The max regulation differential pressure, it means the pressure which can be used during the stroke, is conditioned by wear between seat and plug and by the performance guaranteed by the actuator for the evaluated valve. So we recommend not to overcome the differential pressure whose value corresponds to the minimum between 200 kPa (maximum admitted value not to cause wear) and the one shown in the previous table (max close-off differential pressure).

Note: The max operating pressures at different temperatures for various PN classes must correspond to the following standards: UNI 1092-02 and UNI 12516-1.

OPERATION

With stem up the valve is in closed position, with stem down the valve is open.

ACTUATORS TECHNICAL CHARACTERISTICS, WIRING DIAGRAM AND INSTALLATION

See actuators data sheets and mounting instructions.
