

Three-way Mixing Globe Valves

USE

3F.. series valves are used to control fluids belonging to the group showed in the table in accordance to article 13 of 2014/68/UE (PED) directive, in air-conditioning, thermoventilation and heating plants and in industrial processes; therefore, they cannot be used as safety valves.

MANUFACTURING CHARACTERISTICS

They consist in a 3-way valve body to be assembled on electrical bidirectional actuator.

MOTORIZED VALVES TECHNICAL CHARACTERISTICS AND PERFORMANCES

(1) For applications with possible ice formation on stem and gasket, see 248 accessory.

(2) Graphite packing for high temperatures; forced lubrication on extended neck. Teflon packing for low temperatures, see (4).

(3) Due to the bellows presence, the max applicable pressure must not be higher than 5 bar.

(4) Double O-ring and graphite teflon scraper ring.

(5) Group 1: water, overheated water, steam, diathermic oil. For different fluids belonging to group 1, please contact our Sales Support.
Group 2: water, overheated water, glycole added water (50% max.) steam. For different fluids belonging to group 2, please contact our Sales Support.

(6) PN25 only for 3FAA125P and 3FAA125T.

(7) Leakage is measured according to the EN1349 standard.

The performances stated in this sheet can be modified without any prior notice.

INSTALLATION

HYDRAULIC CONNECTIONS

Respect the fluid direction as indicated in Fig. 1 and 2. In particular, we specify that the valves must be mounted as mixing valves with inlet in A and in B and outlet AB.

VALVE MOUNTING

Before mounting the valve, make sure pipes are clean, free from welding slags. The pipes must be perfectly aligned with the valve body and not subjected to vibrations. For installations on plants with high temperature fluids (steam, overheated water, diathermic oil) use expansion joints to avoid the dilatation of pipes to stress the valve body.

Install the valves with the actuator in vertical position for fluid temperature up to 120°C, with higher temperatures they must be mounted horizontally.

NOTE: Following the hydraulic installation it is necessary to check the tight of the stem packing placed on the bonnet, both in cases of low and high temperatures. The valves require periodic maintenance.

Avoid the valve installation in plants, which are considered aggressive and/or corrosive for valve materials.

Please contact our Sales Support in order to determine which potentially aggressive or polluting substances can be used.

We disclaim all responsibility in case of valve failure due to external fortuitous events (fire, earthquakes etc.).

NOTE: The actuator can be rotated with respect to the valve body by blocking the ring nut; after such operation re-tighten the ring nut.

Attention: The stem of 3FSA.S bellows seal valves must never rotate with respect to the valve body it is connected to through the bellows.

ACTUATORS TECHNICAL CHARACTERISTICS, WIRING DIAGRAMS AND INSTALLATION

See actuators data sheets and mounting instructions.

MOTORIZED VALVES OPTIONS

A125-3	Flanges with ANSI125 bolt holes (for 3FSA/3FSAS DN50÷65 and 3FGB DN25÷150)
A150-3	Flanges with ANSI 150 bolt holes (for 3FSA/3FSAS DN50÷65 and 3FAA/3FAAP/3FAAT DN50÷125 valves)
A300-3	Flanges with ANSI 300 bolt holes (for 3FSA/3FSAS DN25÷65, 3FAA/3FAAP/3FAAT DN32÷65 and DN100÷125 valves)
3FGBxxPS89	Grooved valves PN16 to which it is possible to add the relating joint not supplied with the product. General dimensions remain the same. Joint and pipe dimensions are shown in the "Dimensions" paragraph.

100kPa = 1bar = 10m_{H₂O}

(1) same dimensions as a DN40 valve

* in case of lack of voltage, with MVH.A direct way is closed, with MVH.C angle way is closed.

Kvs is the flow rate expressed in m³/h of water at a temperature between 5°C and 40°C passing through a valve open at the nominal stroke with 100kPa (1bar) differential pressure.

MAX REGULATION DIFFERENTIAL PRESSURE [kPa]

The max regulation differential pressure, it means the pressure which can be used during the stroke, is conditioned by wear between seat and plug and by the performance guaranteed by the actuator for the evaluated valve. So we recommend not to overcome the differential pressure whose value corresponds to the minimum between the one here following (maximum admitted

value not to cause wear) and the one shown in the previous table (max close-off differential pressure).

3FGB = 200kPa 3FSA/3FSAS = 800kPa 3FAA/3FAAP/3FAAT = 1200kPa

NOTE: The max operating pressures at different temperatures for different PN classes must correspond to the following standards: UNI 1092-2 and UNI 12516-1.
