

Characterised control valve, 2-way, Internal thread

- For open and closed cold and warm water systems
- For modulating control of airhandling and heating systems on the water side
- · Air-bubble tight

Type overview

Technical data

Eur	oti	ana	l dat	2

Fluid	Cold and warm water, water with glycol up to max. 50% vol.
Fluid temperature	-10120°C
Fluid temperature note	At a fluid temperature of -102°C, a stem heating or a valve neck extension is recommended. The allowed fluid temperature can be limited, depending on the type of actuator. Limitations can be found in the respective data sheets of the actuators.
Close-off pressure Δps	1400 kPa
Differential pressure Δpmax	350 kPa
Differential pressure note	200 kPa for low-noise operation
Flow characteristic	equal percentage (VDI/VDE 2178), optimised in the opening range
Leakage rate	air-bubble tight, leakage rate A (EN 12266-1)
Angle of rotation	90°
Angle of rotation note	Operating range 1590°
Pipe connectors	Internal thread according to ISO 7-1
Installation position	upright to horizontal (in relation to the stem)
Servicing	maintenance-free
Housing	Nickel-plated brass body
Closing element	Stainless steel
Stem	Stainless steel
Stem seal	EPDM O-ring

Technical data

 Materials
 Seat
 PTFE, O-ring EPDM

 Characterizing disk
 ETFE

Safety notes

- The valve has been designed for use in stationary heating, ventilation and airconditioning systems and must not be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied during installation.
- The valve does not contain any parts that can be replaced or repaired by the user.
- The valve may not be disposed of as household refuse. All locally valid regulations and requirements must be observed.
- When determining the flow rate characteristic of controlled devices, the recognised directives must be observed.

Product features

Mode of operation

The characterised control valve is adjusted by a rotary actuator. The actuator is controlled by a commercially available modulating or 3-point control system and moves the ball of the valve – the throttling device – to the position dictated by the positioning signal. Open the characterised control valve counterclockwise and close it clockwise.

Flow characteristic

Equal percentage flow control is ensured by the integrated characterising disc.

	Pipe connector for ball valve DN 32 Rp 1 1/4"	ZR2332
	Pipe connector for ball valve DN 40 Rp 1 1/2"	ZR2340
	Pipe connector for ball valve DN 50 Rp 2"	ZR2350
	Valve neck extension for ball valve DN1550	ZR-EXT-01

Installation notes

Recommended installation positions

The ball valve can be installed upright to horizontal. The ball valve may not be installed in a hanging position, i.e. with the stem pointing downwards.

Water quality requirements

The water quality requirements specified in VDI 2035 must be adhered to. Belimo valves are regulating devices. For the valves to function correctly in the long term, they must be kept free from particle debris (e.g. welding beads during installation work). The installation of a suitable strainer is recommended.

Installation notes

Servicing

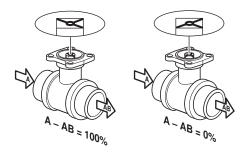

Ball valves and rotary actuators are maintenance-free.

Before any service work on the final controlling device is carried out, it is essential to isolate the rotary actuator from the power supply (by unplugging the electrical cable if necessary). Any pumps in the part of the piping system concerned must also be switched off and the appropriate slide valves closed (allow all components to cool down first if necessary and always reduce the system pressure to ambient pressure level).

The system must not be returned to service until the ball valve and the rotary actuator have been correctly reassembled in accordance with the instructions and the pipeline has been refilled by professionally trained personnel.

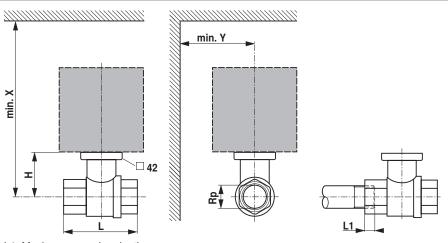

Flow direction

The direction of flow, specified by an arrow on the housing, is to be complied with, since otherwise the ball valve could become damaged. Please ensure that the ball is in the correct position (marking on the spindle).

Dimensions / Weight

Dimensional drawings

L1: Maximum screwing depth.

X/Y: Minimum distance with respect to the valve centre.

The actuator dimensions can be found on the respective actuator data sheet.
