Product features			
Mode of operation	moves the valve to the ope	with a standard modulating signal 010 V. The actuator erating position at the same time as tensioning the return back to the fail-safe position by spring force when the ed.	
Simple direct mounting	Simple direct mounting on the ball valve with only one screw. The mounting orientatio in relation to the ball valve can be selected in 90° steps.		
		e valve can be operated manually and engaged with the on. Unlocking is carried out manually or automatically by age.	
Adjustable angle of rotation	Adjustable angle of rotation with mechanical end stops.		
High functional reliability	The actuator is overload protected, requires no limit switches and automatically stops when the end stop is reached.		
Flexible signalization	The actuator has one auxiliary switch with a fixed setting and one adjustable auxiliary switch. They permit a 10% or 1190% angle of rotation to be signaled.
